About Me

Final-year Computer Science and Engineering student with a strong foundation in Data Structures and Algorithms, ML/AI, and Web Development. Eager to contribute to impactful projects in Software Development, Engineering, and AI/ML domains, with a strong inclination toward applying innovative technologies and continuously expanding my technical expertise.

Education

Indian Institute of Information Technology Pune-Btech in Computer science	CGPA:7.7(2022–2026)
Pratap Public School, Sector-6, Karnal, Haryana-Class XII (CBSE Board)	96.4%(2021)
Delhi Public School, Karnal, Haryana- Class X (CBSE Board)	92.8%(2019)

Experience

Research Intern , Indian Institute of Information Technology, Pune	Sept 2025-Dec 2025
- Developed Optimized Hybrid Text Summarization System using optimized TextRank, BiLSTM with attention, and Sentence-BERT embeddings on the BBC News Summary dataset. - Applied semantic similarity modeling and Maximal Marginal Relevance (MMR) to reduce redundancy and improve coherence, achieving ROUGE-1 scores up to 0.74.	

Projects

AI-Powered Resume Analyzer	2026
- Built a full-stack RAG resume analyzer using LangChain 0.3 LCEL, ChromaDB with MMR retrieval, and Groq's free Llama 3.3 70B LLM — enabling recruiters to query candidate profiles in plain English with semantic search beyond keyword matching. - Implemented a ReAct agent with three custom tools for skill extraction, gap analysis, and candidate ranking, instrumented with LangSmith observability tracing. - Deployed React/Vite frontend on Vercel and async FastAPI backend on Render at zero monthly cost, with local sentence-transformer embeddings eliminating all paid API dependencies.	
Full Stack Sales Prediction Web App	2025
- Built a full-stack AI sales forecasting platform with React, FastAPI, and NeuralProphet, integrating a LangChain-powered conversational AI agent that lets business users query forecasts, detect anomalies, and generate actionable insights in plain English — zero paid API dependencies using Groq's Llama 3.3 70B. - Engineered an end-to-end MLOps pipeline with automated feature engineering (lag, rolling stats, holiday effects), real-time dashboard with Recharts, and one-click PDF/Excel report export.	

Skills

AI/ML & GenAI: LLMs, LangChain, Hugging Face Transformers, Vector Databases, TensorFlow, PyTorch, scikit-learn, Transfer Learning.

Full-Stack Development: React.js, Flask, FastAPI, Streamlit, HTML5/CSS3, Bootstrap.

Programming & Tools: C++, Python, Java, SQL, Git, Docker, VS Code.

Core CS Foundations: Data Structures & Algorithms (300+ solved), DBMS, OOPS, Operating Systems.

Leadership & Achievements

Semi-finalist, Google GenAI Hackathon 2025 — Built LegalLens AI to simplify and analyze legal documents using Gemini 2.5 Pro.

Co-Head, Dance Club (Vanity Crew), IIIT Pune
